

From CodeSandBox to Hostinger Deploy

Step : 1 {next.config.mjs}

output: "export",

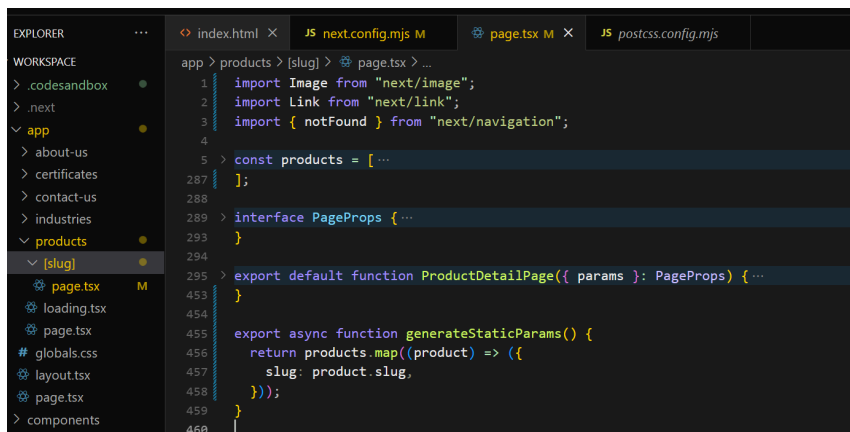

The screenshot shows a VS Code editor with the Explorer sidebar on the left. The Explorer sidebar shows a project structure with folders like 'out', 'public', 'src', 'styles', and files like 'index.html', 'next-env.d.ts', 'next.config.mjs', 'package.json', 'pnpm-lock.yaml', 'postcss.config.js', 'tailwind.config.js', and 'tsconfig.json'. The main editor area shows the 'next.config.mjs' file with the following code:

```
1  /** @type {import('next').NextConfig} */
2  const nextConfig = {
3    output: "export",
4    eslint: {
5      ignoreDuringBuilds: true,
6    },
7    typescript: {
8      ignoreBuildErrors: true,
9    },
10   images: {
11     unoptimized: true,
12   },
13 };
14
15 export default nextConfig;
```

Step : 2 {app/products/[slug]/page.tsx}

(add below script at last)

```
export async function generateStaticParams() {
  return products.map((product) => ({
    slug: product.slug,
  }));
}
```

The screenshot shows a VS Code editor with the Explorer sidebar on the left. The Explorer sidebar shows a project structure with folders like 'app', 'components', and 'pages'. The main editor area shows the 'app/products/[slug]/page.tsx' file with the following code:

```
1  import Image from "next/image";
2  import Link from "next/link";
3  import { notFound } from "next/navigation";
4
5  const products = [
6    // ...
7  ];
8
9  interface PageProps {
10    // ...
11  }
12
13 export default function ProductDetailPage({ params }: PageProps) {
14   // ...
15 }
16
17 export async function generateStaticParams() {
18   return products.map((product) => ({
19     slug: product.slug,
20   }));
21 }
```

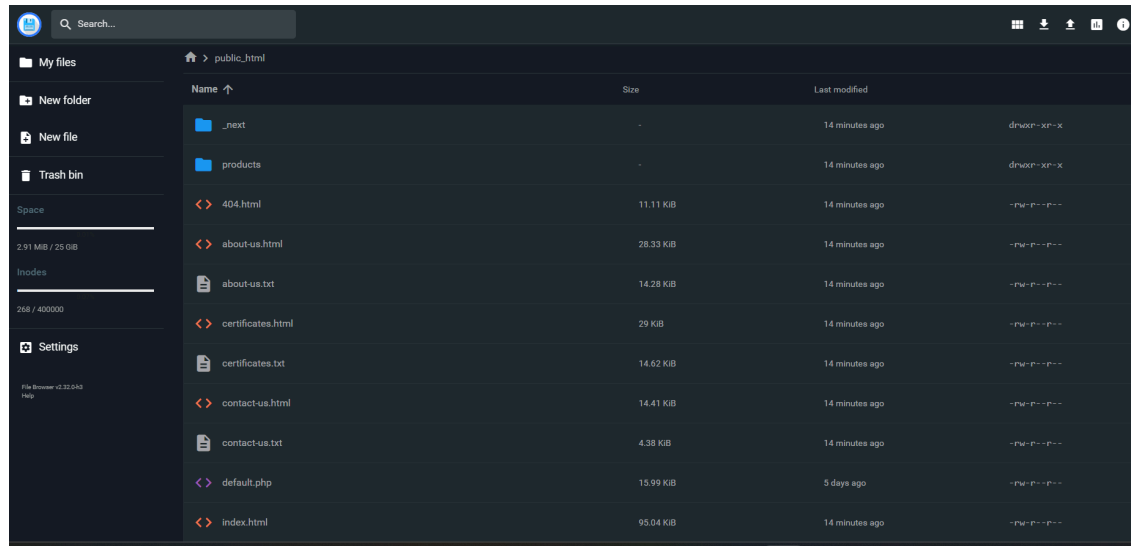

Step : 3

Build your file

Command : "npm run build"

It will create "out folder"

Step : 4 , paste out folder content inside public_html

Step : 5

You are live now

Extras :

- preview [next.js](#) : "npm run dev"
- For dynamic routing like-api calls gps hosting domains are required(hostinger also have it)
- Youtube hosting guide
